

Orkney International Science Festival

In September 2014 we were invited to take part in the [Orkney International Science Festival](#).

We managed 7 workshops resulting in 200 solargraph cameras being made by children at schools, each one designed to take a 3 month image of the sun crossing the sky.

Here are: a few photos, [an interview](#) with radio Orkney and a really catchy song about the festival (to listen to whilst looking at the photos!)
